

The Power of One Normothermia System

Warming blankets. Warming gowns. Temperature monitoring. Complete solutions for pre-op, OR, PACU and beyond. Now, the 3M suite of warming and monitoring products can be leveraged for a comprehensive normothermia solution.

Effectively managing patient normothermia throughout the entire surgical journey can result in healthier, happier and less anxious patients. This can translate into quicker recovery, better patient satisfaction scores, and ultimately result in cost savings.

The 3M™ Bair Hugger™ Normothermia System Mission

Our mission has always been to help perioperative nurses and anesthesia providers measure and maintain normothermia in their patients through a portfolio of warming and temperature monitoring products that are safe, easy to use and effective.

The Bair Hugger, 3M™ Bair Paws™ and 3M™ SpotOn™ brands represent quality products, but as we looked forward to continued innovation it was clear that our focus should be on delivering a normothermia solution rather than offering

singular products. So while the Bair Paws and SpotOn brands have served us well, moving to a single brand name aligns more closely with our vision for the future and our customers.

One System with One Goal - Normothermia

Going forward, the Bair Hugger normothermia system will be the brand synonymous with a cohesive normothermia solution that saves time and money throughout the entire perioperative journey. Eliminating the cost and inefficiency of multiple cotton gowns and blankets, and the hassle of using multiple temperature monitoring products - that's the power of one.

The Power of One Normothermia System

The Bair Hugger normothermia system offers warming and temperature monitoring solutions at each surgical stage to monitor and help prevent unintended hypothermia.

Bair Hugger warming units are compact, lightweight and easy to operate. Numerous mounting configurations allow for the flexibility to meet individual facility needs. And, because patients come in all shapes and sizes, and surgical procedures require a broad range of positions and access points, the Bair Hugger normothermia system offers the widest range of innovative, effective warming blanket and gown designs.

Additional features like adhesive strips, head drapes, drain holes, and tie strips have been integrated into many blanket and gown models. In fact, some blanket models and product

features have come thanks to the feedback from our most valuable team member – our customers.

The Bair Hugger temperature monitoring system is the most recent technology platform to join the portfolio, and it's an important one. Managing patient temperature has been challenging, in part, due to the lack of proven tools to accurately measure temperature throughout all areas of the perioperative process. The Bair Hugger temperature monitoring system provides an accurate, non-invasive method to measure core body temperature from pre-op, into the OR and then PACU, eliminating the need for multiple temperature measurement products and the variation or data bias that can occur from the use of different methods in different environments.
